Music Playlist Management System – DBMS Review 2

DML Query Requirements (English Statements)

1. Display all songs in a selected playlist in their original playlist order.

2. Search for songs whose title contains a user-provided keyword.

3. Display all songs performed by a selected artist.

4. Display all playlists that contain a selected song.

5. Display the number of songs present in each playlist.

6. Calculate the total duration of all songs in a selected playlist.

7. Display the longest songs in a selected playlist.

8. Display all distinct artists whose songs occur in a selected playlist.

9. Display all songs that are not currently associated with any playlist.

10. Display the complete playlist catalogue with each playlist's song count and total duration.

Database Design Used

The database uses four tables: ARTIST, SONG, PLAYLIST, and PLAYLIST_SONG. PLAYLIST_SONG is the associative table for the many-to-many relationship between playlists and songs, and its Position attribute preserves playlist order.

Imported Data

The uploaded playlist filenames contained automatic upload suffixes such as (1) and (2). These suffixes were ignored. The database uses the original playlist names: Alive Mix, AOT Soundtrack, My Mix Rock, My Quick Picks, Queen, X Japan, X Japan - Yoshiki, and You and I Mix.
